WIX 33165 METAL CANISTER FUEL FILTER

Following an original equipment product update, the WIX 33165 canister fuel filter has undergone a design change. The change was made to allow the filter to fit new applications while continuing to be cataloged for as many older applications as possible. Due to the change in construction, the new design is not compatible with some fuel heads found on 1950's, 1960's, and other vintage applications. The new filter continues to offer excellent filtration for all appropriate applications.
