HEAVY DUTY BULLETIN

WIX 33966
Fuel Filter Product Update

A recent update for the 33966 has been made with a change in manufacturing locations. Noticeable changes include a difference in height, sealing sizes, and baseplate design.

Previous 33966 **Updated 33966**

The filter sealing gasket is now a different size. The previous (left) is *slightly* shorter than the updated (right).

The thread sealing washer has also been updated. The previous (left) is noticeably taller than the updated (right).

The baseplate has changed as well. The previous (left) has been updated to a convex design (right).

The previous and updated 33966 are still interchangeable. However the updated thread gaskets *MUST* be used with the updated product. Mixing gaskets of the previous product with the updated product will result in an improper fit and seal.
