Crankcase Ventilation

Engine oil separators stop oil from recirculating into the cylinders, preventing carbon buildup. Excessive carbon on valves and pistons can cause drivability issues and may lead to major repairs. Standard® Engine Oil Separators are engineered and tested to keep engines operating efficiently.

POSITIVE CRANKCASE VENTILATION (PCV) VALVES

PCV valves reroute positive pressure produced by the crankcase back into the engine's combustion chambers via the intake manifold. The PCV valve will open to allow air out of the crankcase and close to block pressure from returning back into it.
